CUCKOO CLOCKS

Set-UP

1) Unwind chains from around case.
2) Hang the clock on the wall SECURELY.
3) Hook the pendulum onto loop that is hanging down through slot in the bottom of case.
4) Attach weights to hooks on the chains and if need be, pull down on the other chains until weights are up to the bottom of the case.
5) LIGHTLY push the pendulum to the side until a ticking sound is heard.
6) Grip the bottom front of the case and slowly move it to one side or the other until an even Ticking sound is heard. Clock will not run if it is out of beat.
7) Setting the hands to the correct time:
   A) Move the minute (long) hand forward (clockwise) stopping, at each hour and half-hour and letting the clock strike before going on, until the correct time is reached.
   B) OR stop the pendulum from swinging and let the time catch up to the clock.

***DO NOT MOVE THE HOUR HAND BY ITSELF OR
                                        TURN THE HANDS BACKWARDS***

TIME ADJUSTMENT

1) Gently grab hold of the pendulum and keep it from swinging back and forth.
2) The leaf part of the pendulum will slide up and down to speed up or slow down the clock.
3) To SLOW it down.... Pull the leaf down the stick. Not much movement is necessary for change.
4) To SPEED it up.... Push the leaf up the stick. Not much movement is necessary for change.
5) Do not adjust the pendulum more than twice a day--BE PATIENT.
6) After adjusting the leaf on the stick, then reset the hands to the correct time (see #7 of Set-UP")

SUGGESTIONS

1) Do not hang clock where there will be a draft from a window, door or fan, the pendulums are very light and exposing them to a draft could stop the clock.
2) When pulling the weights up on the clock, hold onto the case with one hand while pulling with the other, this will insure that your clock will remain level)
3) Make sure that the clock is FLAT against the wall.
